

ASMT-Bx20

PCB-Based Subminiature Lamps (PCB PolyLED)

Description

The Broadcom® ASMT-Bx20 is an environmentally friendly green product of unique PCB-based subminiature lamps, namely PCB PolyLED. These PolyLEDs come in an untinted, nondiffused package to cater to various product themes and ease handling applications.

The small size, narrow footprint, and high brightness make these LEDs excellent for backlighting, status indication, and panel illumination applications.

The available colors are AlInGaP red, AlInGaP green, InGaN blue, and AlInGaP amber.

To facilitate pick-and-place operation, these PCB PolyLEDs are shipped in tape and reel, with 1500 units per reel. The package is compatible with reflow soldering and are binned by both color and intensity.

a. The luminous intensity, I_V , is measured at the peak of the spatial radiation pattern, which may not be aligned with the mechanical axis of the LED package.

b. The dominant wavelength, λ_d , is derived from the CIE Chromaticity Diagram and represents the perceived color of the device.

c. $\theta_{1/2}$ is the off-axis angle where the luminous intensity is $\frac{1}{2}$ the peak intensity.
