User's Guide

Note the following details of the code protection feature on Microchip devices:

- Microchip products meet the specification contained in their particular Microchip Data Sheet.
- Microchip believes that its family of products is one of the most secure families of its kind on the market today, when used in the intended manner and under normal conditions.
- There are dishonest and possibly illegal methods used to breach the code protection feature. All of these methods, to our knowledge, require using the Microchip products in a manner outside the operating specifications contained in Microchip's Data Sheets. Most likely, the person doing so is engaged in theft of intellectual property.
- Microchip is willing to work with the customer who is concerned about the integrity of their code.
- Neither Microchip nor any other semiconductor manufacturer can guarantee the security of their code. Code protection does not mean that we are guaranteeing the product as "unbreakable."

Code protection is constantly evolving. We at Microchip are committed to continuously improving the code protection features of our products. Attempts to break Microchip's code protection feature may be a violation of the Digital Millennium Copyright Act. If such acts allow unauthorized access to your software or other copyrighted work, you may have a right to sue for relief under that Act.

NOTICE TO CUSTOMERS

All documentation becomes dated, and this manual is no exception. Microchip tools and documentation are constantly evolving to meet customer needs, so some actual dialogs and/or tool descriptions may differ from those in this document. Please refer to our web site (www.microchip.com) to obtain the latest documentation available.

Documents are identified with a “DS” number. This number is located on the bottom of each page, in front of the page number. The numbering convention for the DS number is “DSXXXXXA”, where “XXXXX” is the document number and “A” is the revision level of the document.

For the most up-to-date information on development tools, see the MPLAB® IDE online help. Select the Help menu, and then Topics to open a list of available online help files.

INTRODUCTION

This chapter contains general information that will be useful to know before using the EVB-UPD301A (SRC) Evaluation Kit User's Guide. Items discussed in this chapter include:

- Document Layout
- Conventions Used in this Guide
- Warranty Registration
- The Microchip Web Site

- Document Revision History

DOCUMENT LAYOUT

This document describes how to use the EVB-UPD301A (SRC) Evaluation Kit as a demonstration platform optimized for portable applications. The manual layout is as follows:

- **Chapter 1. “Overview”** – Shows a brief description of the EVB-UPD301A (SRC) Evaluation Kit.
- **Chapter 2. “Getting Started”** – Provides information about set-up and operation of the EVB-UPD301A (SRC) Evaluation Kit.
- **Chapter 3. “Hardware Configuration”** – Includes information about the hardware configuration of the EVB-UPD301A (SRC) Evaluation Kit.
- **Appendix A. “Schematics”** – This appendix shows the EVB-UPD301A (SRC) Evaluation Kit schematic.
- **Appendix B. “Bill of Materials”** – This appendix includes the EVB-UPD301A (SRC) Evaluation Kit Bill of Materials (BOM).
- **Appendix C. “PCB Silk Screens”** – This appendix shows the EVB-UPD301A (SRC) Evaluation Kit silk screen images.

WARRANTY REGISTRATION

Please complete the enclosed Warranty Registration Card and mail it promptly. Sending the Warranty Registration Card entitles users to receive new product updates. Interim software releases are available at the Microchip web site.

THE MICROCHIP WEB SITE

Microchip provides online support via our web site at www.microchip.com. This web site is used as a means to make files and information easily available to customers. Accessible by using your favorite Internet browser, the web site contains the following information:

- **Product Support** – Data sheets and errata, application notes and sample programs, design resources, user's guides and hardware support documents, latest software releases and archived software
- **General Technical Support** – Frequently Asked Questions (FAQs), technical support requests, online discussion groups, Microchip consultant program member listing
- **Business of Microchip** – Product selector and ordering guides, latest Microchip press releases, listing of seminars and events, listings of Microchip sales offices, distributors and factory representatives

CUSTOMER SUPPORT

Users of Microchip products can receive assistance through several channels:

- Distributor or Representative
- Local Sales Office
- Field Application Engineer (FAE)
- Technical Support

Customers should contact their distributor, representative or field application engineer (FAE) for support. Local sales offices are also available to help customers. A listing of sales offices and locations is included in the back of this document.

Technical support is available through the web site at:

EVB-UPD301A (SRC) EVALUATION KIT USER'S GUIDE

Chapter 1. Overview

1.1 INTRODUCTION

The EVB-UPD301A (SRC) Evaluation Kit is a demonstration and evaluation platform that provides the necessary requirements and interface options for evaluating the UPD301A, a USB Power Delivery Controller on a 4-layer, RoHS-compliant Printed Circuit Board (PCB). This allows the user to gain an understanding of the product and accelerate the integration of the UPD301A into the user's design.

The EVB-UPD301A is compliant with the USB Power Delivery Specification (Revision 3.0). The evaluation platform supports two pass-through USB ports. The EVB-UPD301A platform also supports battery charging on both downstream ports. The EVB-UPD301A (SRC) supports three configurations for operation through programmable internal default settings and supports custom configurations through pin straps.

The EVB-UPD301A demonstrates driver compatibility with Microsoft® Windows® 10, Windows 8.x, Windows 7, Windows XP, Mac® OS X 10.4+, and Linux® USB drivers.

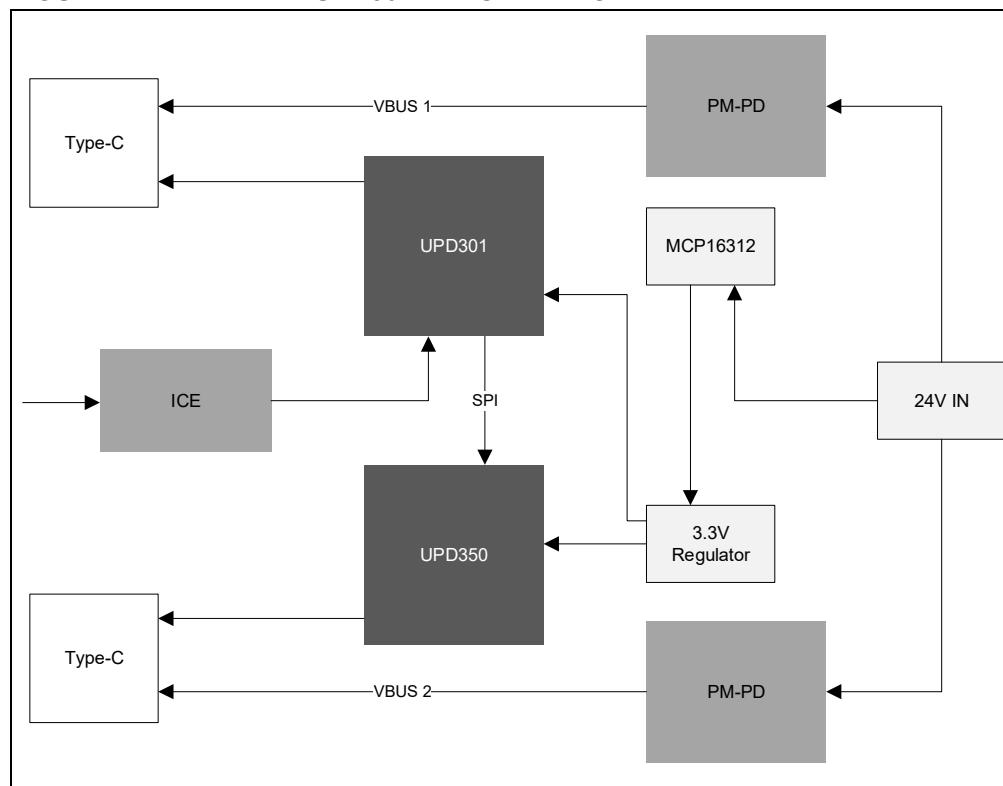

Note 1: See [Section 1.2 “Features”](#) for more information.

2: Requires a 24V, 120W bench power supply.

1.2 FEATURES

- UPD301A in a 40-pin QFN RoHS-compliant package
- USB Power Delivery 3 Compliant
- USB 3.1 Compliant (Gen1 PASS THROUGH operation)
- USB 2.0 Compliant (HS, FS, and LS PASS THROUGH operation)

Chapter 2. Getting Started

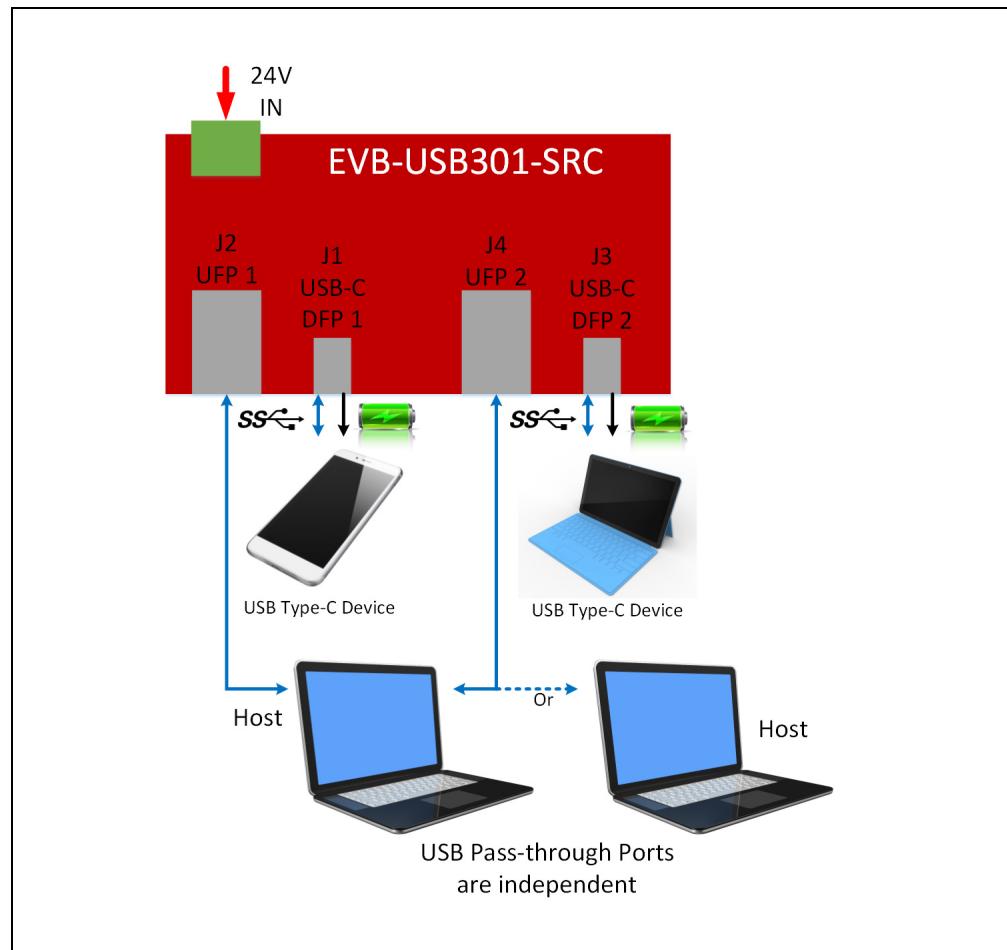

2.1 GETTING STARTED

The Microchip EVB-UPD301A is designed for flexible configuration solutions. It can be configured via default internal register settings, through the on-board configuration switches.

The EVB-UPD301A demonstrates two basic topologies: (1) USB pass-through and (2) basic USB Type-C charging port.

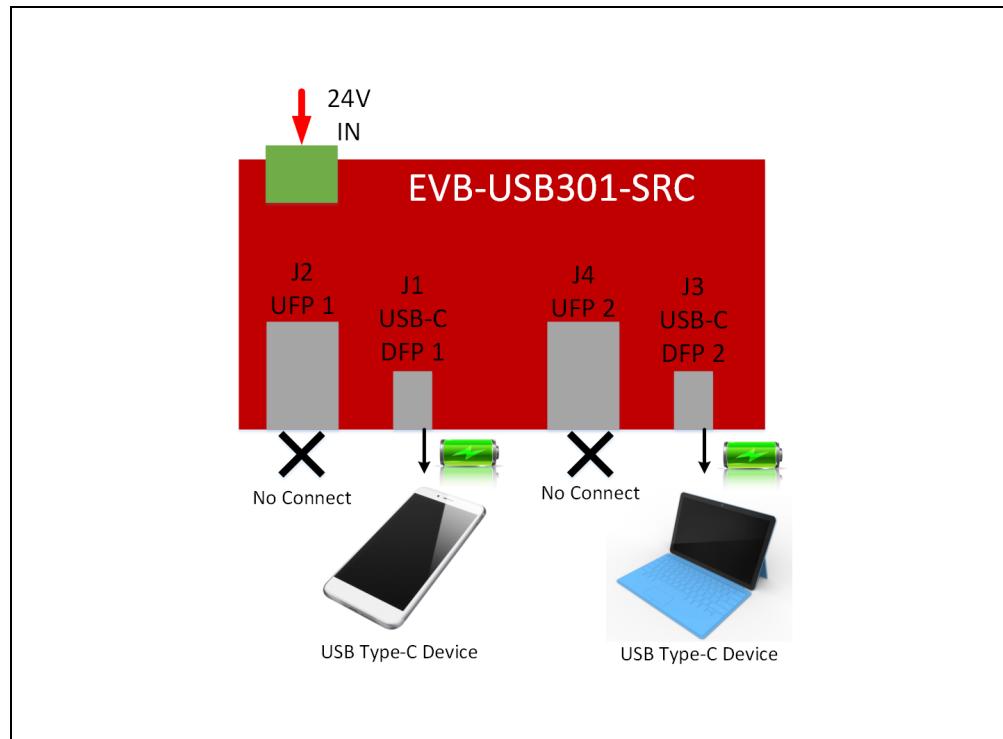

In the USB pass-through topology, the host PC is connected to the evaluation platform using standard USB Type-A or Type-B cables. Type-C devices are then connected to the standard host PC platform via the USB pass-through. The EVB-UPD301A (SRC) platform does not support data role swap. When a host platform (for example, PC) is connected to the EVB Type-C port, the USB pass-through is not supported.

FIGURE 2-1: USB PASS-THROUGH EXAMPLE

The second topology demonstrates a basic Type-C charging port. In this topology, the Type-B receptacles are not used. Type-C devices and host platforms are connected to the EVB Type-C ports. The UPD301A supports all PD3.0 charging profiles: 5V, 9V, 15V, and 20V, and supports up to 3A of current at 20V for a total of 60W.

FIGURE 2-2: USB TYPE-C CHARGING PORT EXAMPLE

2.2 KIT CONTENTS

The EVB-UPD301A evaluation kit includes basic equipment necessary for evaluation. The items included in the kit are:

- EVB-UPD301A Evaluation Board

2.3 QUICK START

To quickly start using the board, perform the following steps:

1. Connect a 24V, 5A power supply to the terminal block connector on the EVB-UPD301A (J5).
2. Using a standard Type-A to Type-B USB cable, connect the EVB-UPD301A to a USB host via the upstream "Port 1" J2.
3. Using a standard Type-A to Type-B USB cable, connect the EVB-UPD301A to a USB host via the upstream "Port 2" J4.

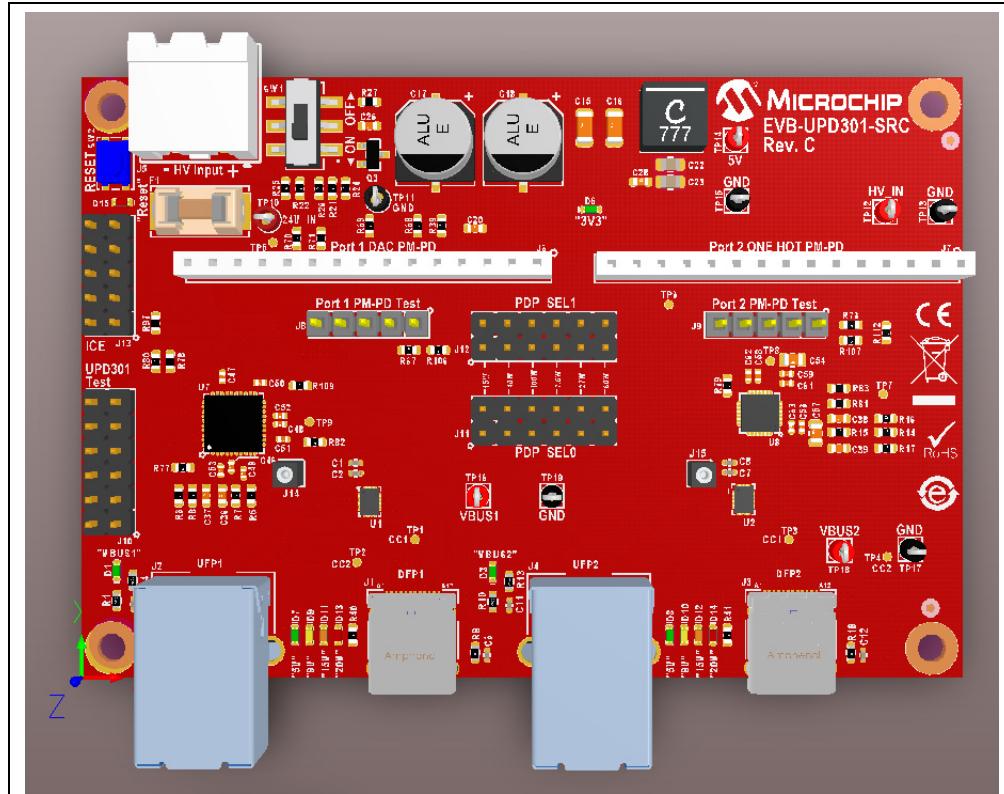

Devices may now be connected to either of the two downstream facing Type-C ports to enumerate and use those devices with the USB host.

Chapter 3. Hardware Configuration

3.1 HARDWARE CONFIGURATION OPTIONS

Figure 3-1 shows the top view of the EVB-UPD301A.

FIGURE 3-1: EVB-UPD301A REV C (TOP VIEW)

3.1.1 Configuration

3.1.1.1 INTERNAL DEFAULT CONFIGURATIONS WITH STRAPPING OPTIONS

Upon power-up, the UPD301A uses internal default register settings. The controls are configured by selecting one of the six resistor values for each pin. EVB-UPD301A demonstrates three of the six possible resistor values for each profile. These straps are sensed by the UPD301A device at power-on to determine the resultant configuration of the device. To select the preferred configuration, shunts must be connected to J11 and J12 headers (refer to [Table 3-1](#)).

Note: The VID, PID, and DID, and additional settings are configured using the internal ROM code.

TABLE 3-1: CONFIGURATION OPTIONS FOR PORTS 1 AND 2

J11/J12 Shunt Position	(J11/J12 is shunted pins 11-12)	PDP
1-2	200K Pull-Up Configuration 2	15W
3-4	4.7K Pull-Up Configuration 4	45W
5-6	10R Pull-Up Configuration 6 (NOT SUPPORTED)	NA
7-8	200K Pull-Down Configuration 1	7.5W
9-10	4.7K Pull-Down Configuration 3	27W
11-12	10R Pull-Down Configuration 5 (DEFAULT)	60W

3.1.2 Power Source - Self Powered

The EVB-UPD301A only supports self-powered operation. Power is supplied through one +24.0V regulated external power supply. The power supply is connected to the screw terminal "HV_INPUT" (J5). The +24.0V feeds two 5A PM-PD modules that output +5V, +9V,+15V, or +20V (nominal) to the Type-C VBUS and also supplies the on-board +3.3 regulator.

CAUTION

SW1 must be used to enable the 24.0V external power supply; otherwise, damage may occur to the power circuit. It is recommended to use a high power bench supply. Failure to heed to this warning could result in damage to the 24.0V power circuit.

3.1.3 Downstream Port Power Control

USB power to the two downstream ports is controlled via port power controllers with auto-discharge functionality. All downstream ports support Type-C battery charging.

The two downstream Type-C ports are each capable of up to 3A of current at 20V.

3.1.4 USB Type-C Ports

The UPD301A has two USB3.2 Type-C pass-through ports. The UPD301A also features integrated Type-C control signal (CC) detection to determine when and in what orientation a USB Type-C attach has been made. It powers the VBUS needed for both USB communication and PD communication.

3.1.5 LED Indicators

Table 3-2 describes the LED indicators on the EVB-UPD301A (SRC).
