

DESCRIPTION

The MP2223 is a dual channel synchronous rectified step-down switch mode converter with built in internal power MOSFETs. It offers a very compact solution to achieve 3A/2A continuous output current over a wide input supply range.

Two channels operate with 180° out-of-phase to minimize the input capacitor and alleviate EMI. Current mode operation provides fast transient response and eases loop stabilization. Full protection features include hiccup mode OCP and thermal shut down.

Other features include power save mode at light load, and separate enable for power sequence control.

The MP2223 requires a minimum number of readily available standard external components and is available in a space saving 8-pin TSOT23-8 package.

ELECTRICAL SPECIFICATION (1)

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	4.5 to 18	V
Output Voltage(1)	$V_{OUT(1)}$	1.8	V
Output Voltage(2)	$V_{OUT(2)}$	1.2	V
Output Current(CH1)	$I_{OUT(1)}$	3	A
Output Current(CH2)	$I_{OUT(2)}$	2	A

Notes:

1) For different Input/output voltage specs and different output capacitor/inductor may need change the application circuit parameters.

FEATURES

- Wide 4.5V to 18V Operating Input Range
- 70mΩ/50mΩ for CH1, 100mΩ/60mΩ for CH2, Low $R_{ds(on)}$ Internal Power MOSFETs
- Up to 3A (CH1) and 2A (CH2) Maximum Continuous Output Current
- 180° out-of-phase Operation
- Power Save Mode for Light Load
- 540kHz Fixed Switching Frequency
- OCP Protection and Hiccup
- OVP Protection
- Thermal Shutdown
- Both Channel Output Adjustable from 0.8V
- Available in a TSOT23-8 Package

APPLICATIONS

- Laptop Computer
- Tablet PC
- Networking Systems
- Server
- Distributed Power Systems

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

QUICK START GUIDE

1. Preset the input power supply output between 4.5V and 18V.
2. Turn off the input power supply.
3. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
4. Connect the positive and negative terminals of the input power supply output to the VIN and GND pins, respectively.
5. Turn input power supply on after making connections. The board will automatically start up.
6. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.41V to turn on the regulator, or less than 0.95V to turn it off.
