

EV2664-G-00A

Evaluation Board of 500mA Linear Charger with Power Path Management for Single-Cell Li-Ion Battery in QFN package

DESCRIPTION

The EV2664-G-00A is an evaluation board for the MP2664, a highly-integrated single-cell Li-Ion/Li-Polymer battery charger with system power path management, targeted at space limited portable applications. It takes input power from either an AC adapter or a USB port to supply the system load and charge the battery independently. The charger section features constant current pre charge (PRE.C), constant current fast charge (CC) and constant voltage (CV) regulation, charge termination and charge status.

EV2664 ensures the continuous power to the system by automatically selecting the input, the battery or both to power the system.

EV2664 provides system short circuit protection to prevent the Li-Ion battery from being damaged due to excessive high current.

EV2664 cuts off the path between battery and system when battery UVLO to prevent the Li-Ion battery from being overly discharged.

Through the I2C connector on EV2664, the customer can program the charging parameters, such as: input current limit, input minimum voltage regulation, charging current, battery regulation voltage, and battery UVLO.
