

### DESCRIPTION

The MP3373 is a step-up controller with 8-channel external current sources designed for driving the WLED arrays for large size LCD panel backlighting applications.

The MP3373 employs peak current mode, fixed frequency architecture to provide robust operation with 9V to 40V input supply. The switching frequency is programmable by an external frequency setting resistor.

The MP3373 integrates the constant current control circuit to regulate each LED string current to the programmed value set by an external resistor. And the current matching can achieve 1.2% regulation accuracy between strings. Its low 200mV regulation voltage on LED current sources reduces power loss and improves efficiency.

To reduce inrush current and the stress of components, MP3373 employs the phase shift PWM dimming mode which can be disabled by pulling PSEN pin to GND.

MP3373 also includes UVLO, LED short/open protection, inductor/diode short protection and thermal shut down protection. All fault status is indicated by fault flag signal.

The MP3373 is flexible for extending LED channels with two or three ICs in parallel with sharing one power stage. It is available in TSSOP28 and SOIC28 packages.

### ELECTRICAL SPECIFICATIONS

Parameter	Symbol	Value	Units
Input Voltage	$V_{IN}$	9 – 28	V
LEDs #		8 LED string 10 LEDs/string	
LED Current	$I_{LED}$	200/string	mA

### FEATURES

- 9V to 40V Input Voltage Range
- 8-Channel LED strings with external current balance
- 1.2% Current Matching Accuracy Between Strings
- Programmable Switching Frequency
- External PWM Dimming
- Selectable Phase Shift Function at PWM DIM Mode
- Open/Short LED Protection
- Short Inductor/Diode Protection
- Programmable Over-voltage Protection
- Thermal Shutdown
- Fault Flag Output
- Extendable LED Channels with Share One Set of Power Stage
- TSSOP-28 and SOIC-28 Packages

### APPLICATIONS

- LCD Flat Panel Displays
- 2D/3D LCD TVs and Monitors

All MPS parts are lead-free and adhere to the RoHS directive. For MPS green status, please visit MPS website under Products, Quality Assurance page.

## EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 18V$ , 10 LEDs in series, 8 strings parallel, 200mA/string,  $T_A = 25^\circ C$ , unless otherwise noted.

**Steady State**

**EN Power On**

**DC Dimming**

$V_{DIM} = 1V$

**EN Dimming**

200Hz 50% PWM Dimming

**PWM Dimming**

200Hz 50% PWM Dimming

**Phase Shift**

200Hz 10% PWM Dimming

**Open a String@  
working normally**

**Short a String@  
working normally**

**Short Inductor**

## PRINTED CIRCUIT BOARD LAYOUT

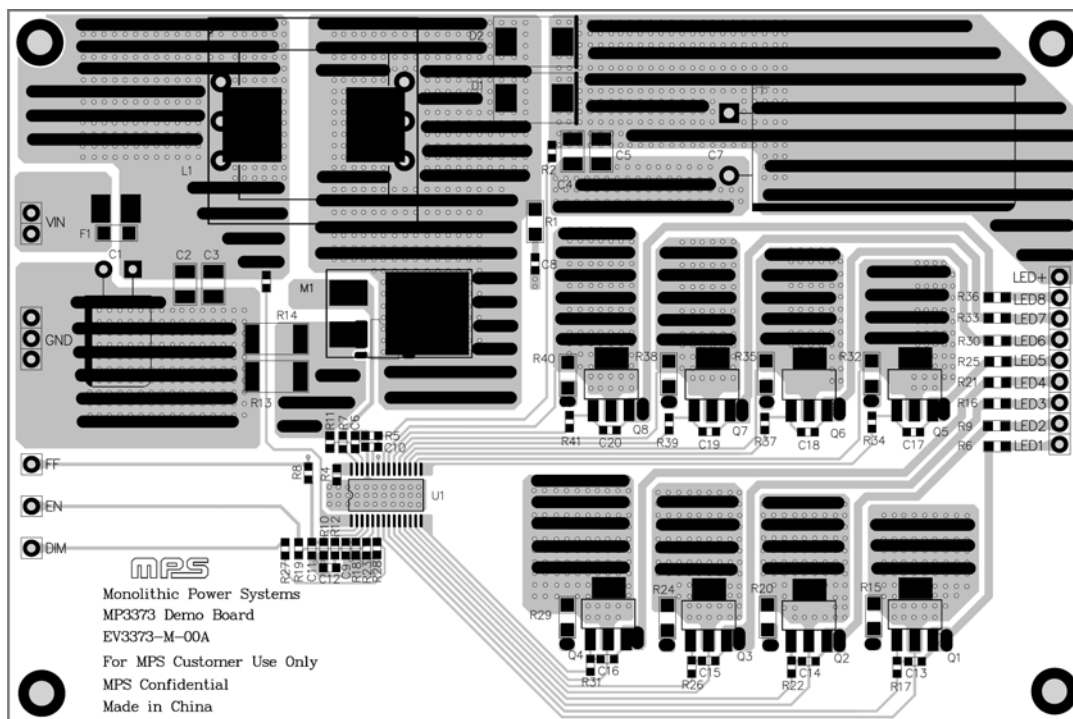

Figure 1—Top Layer

Figure 2—Bottom Layer

## QUICK START GUIDE

1. Connect the positive and negative terminals of the load panel (10 white LEDs in series, 8 strings) to the LED+ and LED-1~8 pins (external PNP's Emitter) on the EV board, respectively.
2. Connect the positive and negative terminals of the power supply (9V ~ 28V) to the VIN and GND pins on the EV board, respectively.
3. Drive EN pin high (5V) to enable the MP3373.
4. For PWM dimming, apply a PWM rectangular waveform with a minimum voltage less than 0.3V and a maximum greater than 1.6V on EN/PWM pin or DIM pin ( if using EN/PWM pin, need pull DIM pin to high level). The frequency of the PWM signal is recommended between 200Hz to 2kHz.
5. For analog dimming, apply a DC waveform with a voltage between 0.4 and 1.5V on DIM pin.
