

DESCRIPTION

The MP5030 integrates a USB current limit switch and charging port identification circuit. It achieves 3A continuous output current over a wide input supply range.

The output of USB switch is current limit programmable. MP5030 supports DCP schemes for Battery Charging specification (BC1.2), the divider Mode, 1.2V/1.2V Mode and Quick Charge specification (QC 3.0) without the need for external user interaction. It also supports Type-C 5V@3A DFP mode.

MP5030 provides linear line drop compensation.

Fault protection includes hiccup current limiting, input OVP and thermal shutdown.

The MP5030 is available in QFN-10(1.5mmx2mm) package.

1. Preset Power Supply to 14V.
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
 - a. Positive (+): VIN
 - b. Negative (–): GND
4. Turn Power Supply on after making connections. The board will automatically start up.
5. Connect different mobile phones to Type-A or Type-C USB port for charging test. Note that Type-A and Type-C port can't be used at the same time. When Type-C phone is connected, remove R10 (5.1k) on board.
