

EV6005-K-00B

High Efficiency Flyback/Forward Controller Secondary-Side Regulate Forward EV Board

DESCRIPTION

EV6005-K-00B Evaluation Board is designed to demonstrate the capability of MP6005. The MP6005 is a high power, high efficiency flyback and forward controller. It is specifically designed for both low cost, small size isolated solution with primary-side regulate (PSR) flyback application, and high efficiency secondary-side regulate (SSR) active-clamped forward application. It also can be used in SSR flyback topology.

MP6005 senses the third winding waveform on primary side to regulate output in PSR mode, saves the traditional complex opto-isolator circuit. MP6005 can also be set as SSR mode, while the SYNC driver provides high efficiency solution for active-clamped forward topology.

The MP6005 also features with 2A GATE driver, frequency dithering, over load protection and over voltage protection.

The MP6005 is available in MSOP10 package.

Electrical Specification

Parameter	Symbol	Value	Units
Input Voltage	V_{IN}	36-57	V
Output Voltage	V_{OUT}	5	V
Output Current	I_{OUT}	4.8	A

FEATURES

- 36V to 57V Input Voltage Range
- 5V Output Voltage and 4.8A Output Current
- High Efficiency Active-clamped Forward Solution
- 250kHz Fixed Switching Frequency
- EMI Reduction with Frequency Dithering
- Auxiliary Winding Supply VCC to Save IC Loss
- 2A GATE and 0.8A SYNC Drivers
- 160mV Switching Current Sense Limit
- Hiccup Protection for OLP, SCP, OVP and Thermal Shutdown
- Available in MSOP10 Package

APPLICATIONS

- Security Camera
- Video Telephone
- Wireless AP
- POS System
- Industrial Isolated Power Supply

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

EV6005-K-00B EVALUATION BOARD

(L x W x H) 9cm x 3.5cm x 2cm

Board Number	MPS IC Number

QUICK START GUIDE

The output voltage of this board is set to 5V. The board layout accommodates most commonly used components. Following are steps to quick start EV6005-K-00B.

1. Preset Power Supply to $36V \leq V_{IN} \leq 57V$.
2. Turn Power Supply off.
3. Connect Power Supply terminals to:
 - a. Positive (+): VIN
 - b. Negative (-): VINGND
4. Connect Load to:
 - a. Positive (+): VOUT
 - b. Negative (-): VOGND
5. Turn Power Supply on after making connections. The MP6005 will automatically startup.
