EV8861-L-00A

High Efficiency, 6A, 18V, Synchronous Step-Down Converter with I²C Interface

DESCRIPTION

The EV8861-L-00A is used for demonstrating the performance of MPS's MP8861. MP8861 is a highly integrated and high frequency synchronous step-down switcher with I²C control interface. It offers a fully integrated solution that achieves 6A of continuous output current with excellent load and line regulation over a wide input supply range.

COT control operation provides fast transient response and eases loop stabilization. In I²C control loop, the output voltage level can be controlled, on-the fly through an I²C serial interface. Output voltage range can be adjusted from 0.6V to 1.108V in 4mV steps. Voltage scaling slew rate, enable and power saving mode are also selectable through the I²C interface. Full protection features include over voltage, over-current protection and thermal shut down.

The MP8861 is available in QFN-14(3mmx4mm) package.

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Input Voltage	V _{IN}	2.85– 18	V
Output Voltage	V _{OUT}	1	V
Continuous Output Current	I _{OUT}	6	A

FEATURES

- Wide 2.85V-to-18V Operating Input Range
- 6A Continuous Output Current
- 1% Internal Reference Accuracy
- I²C Programmable Output Range from 0.6V to 1.108V in 4mV Steps with Slew Rate Control
- 5% Accuracy Output Voltage and Output Current Read Back Via I²C
- Selectable PFM/PWM Mode and Adjustable Frequency & Current Limit Through I²C
- 4 Different I²C Address Selectable
- External Soft Start
- Open Drain Power Good Indication
- Output Over Voltage Protection
- Hiccup/Latch off OCP Protection
- QFN-14(3mmx4mm) Package

APPLICATIONS

- Solid State Driver (SSD)
- Flat-Panel Television and Monitors
- Digital Set-Top Boxes
- Distributed Power Systems

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance. "MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

EV8861-L-00A EVALUATION BOARD

(4 layer PCB, 8.5cmx8.5cm)

Board Number	MPS IC Number
EV8861-L-00A	MP8861GL

Efficiency vs. Output Current
V_{OUT}=1V, L=1.5μH, DCR=2.1mΩ

EVALUATION BOARD SCHEMATIC

EV8861-L-00A BILL OF MATERIALS

EVB TEST RESULTS

Performance waveforms are tested on the evaluation board.

$V_{IN} = 12V$, $V_{OUT} = 1V$, $L = 1.5\mu H$, $F_S = 500kHz$, Auto PFM/PWM mode, $T_A = 25^\circ C$, unless otherwise noted.

EVB TEST RESULTS *(continued)*

Performance waveforms are tested on the evaluation board.

$V_{IN} = 12V$, $V_{OUT} = 1V$, $L = 1.5\mu H$, $F_S = 500kHz$, Auto PFM/PWM mode, $T_A = 25^\circ C$, unless otherwise noted.

EVB TEST RESULTS *(continued)*

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the VOUT and GND pins, respectively.
2. Preset the power supply output between 2.85V and 18V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on. The board will automatically start up.
5. To use the Enable function, apply a digital input to the EN pin. Drive EN higher than 1.3V to turn on the regulator, or less than 0.99V to turn it off.
6. To program I²C function, connect SCL, SDA and GND to I²C start kit board. Connect I²C start kit board to computer and run MP8861 GUI software to program MP8861 I²C register.
