

DESCRIPTION

The EVQ4487-U-00A is an evaluation board for MPQ4487, which integrates a monolithic step-down switch-mode converter with two USB current-limit switches and Type-C 5V@3A mode configure channel for each port. It achieves 6A max output current over a wide input-supply range with excellent load and line regulation.

The output of the USB switch is current limited. Both USB ports support TYPE-C 5V@3A DFP Mode eliminating outside user interaction.

Fault condition protection includes hiccup current limiting, output OVP, and thermal shutdown (TSD).

ELECTRICAL SPECIFICATION

Parameter	Symbol	Value	Units
Operating Input Voltage	V_{IN}	12	V
Switching Frequency	F_s	450	kHz
Output Voltage	V_{USB1}/V_{USB2}	5.17	V
Output Current	USB1_ I_{OUT}	3	A
	USB2_ I_{OUT}	3	A

FEATURES

- Wide 6V to 36V Operating Input-Voltage Range
- Selectable Output Voltage: 5.1V, 5.17V and 5.3V
- 90mV Line Drop Compensation
- Accurate USB1/USB2 Output-Current Limit
- 18mΩ/15mΩ Low $R_{DS(ON)}$ Internal Buck Power MOSFETs
- 18mΩ/18mΩ Low $R_{DS(ON)}$ Internal USB1/USB2 Power MOSFETs
- Load Shedding versus Temperature
- Hiccup Current Limit for both Buck and USB
- Supports USB TYPE-C 5V@3A Mode

APPLICATIONS

- USB Hub
- Automotive Cigarette Lighter Adapters
- Power Supply for Linear Chargers

All MPS parts are lead-free, halogen free, and adhere to the RoHS directive. For MPS green status, please visit MPS website under Quality Assurance.

"MPS" and "The Future of Analog IC Technology" are Registered Trademarks of Monolithic Power Systems, Inc.

QUICK START GUIDE

1. Connect the positive and negative terminals of the load to the USB1, USB2 and GND pins, respectively.
2. Preset the power supply output between 6V and 36V, and then turn off the power supply.
3. Connect the positive and negative terminals of the power supply output to the VIN and GND pins, respectively.
4. Turn the power supply on, the board will automatically start up. But if no type-C device is attached, there is no Vbus output.
5. For USB Type-C 5V/3A DFP mode, if no type-C device is attached, short pin1 and pin 3 of CN1 with a jumper to enable USB1 output, short pin 11 and pin 13 of CN1 with a jumper to enable USB2 output; short pin 2 and pin 4 of CN1 with a jumper to enable VCONN1 output, short pin 12 and pin 14 of CN1 with a jumper to enable VCONN2 output;

If type-C device is attached, all CN1 pins should be float.

6. For USB Type-A 5V/2.4A mode, change R7 =80.6k Ω , remove C7 and short pin1 and pin 3 of CN1 with a jumper to enable USB1 output; change R8 =80.6k Ω , remove C8 and short pin 11 and pin 13 of CN1 with a jumper to enable USB2 output. Keep R9, R10 float.
