Basic-type Digital Temperature Controller

E5GN (48 x 24 mm)

CSM_E5GN_DS_E_7_5

New 48 x 24-mm Basic Temperature Controller with Enhanced Functions and Performance. Improved Indication Accuracy and Preventive Maintenance Function.

- Indication Accuracy
 Thermocouple input: ±0.3% of PV (previous models: ±0.5%)
 Pt input: ±0.2% of PV (previous models: ±0.5%)
 Analog input: ±0.2% FS (previous models: ±0.5%)
- Models are available with screw terminal blocks or screwless clamp terminal blocks.
- A PV/SV-status display function can be set to automatically alternate between displaying the status of the Temperature Controller (auto/manual, RUN/STOP, and alarms) and the PV or SV.
- Preventive maintenance for relays in the Temperature Controller using a Control Output ON/OFF Counter.
- Switch the PV display between three colors.
- Compatible with Support Software (CX-Thermo version 4.2 or higher).
- Eleven-segment displays.
- Models are available with one or two alarm outputs.

For the most recent information on models that have been certified for safety standards, refer to your OMRON website.

Refer to Safety Precautions for E5 N/E5 N-H.

Refer to *Operation for E5_N/E5_N-H* for operating procedures.

Main I/O Functions

This datasheet is provided as a guideline for selecting products. Be sure to refer to the following user manuals for application precautions and other information required for operation before attempting to use the product.

E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers User's Manual Basic Type (Cat. No. H156)

E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers Communications Manual Basic Type (Cat. No. H158)

Lineup

Note: Models with one control output and one or two auxiliary outputs can be used for heating/cooling control.

Model Number Structure

Model Number Legend Controllers

1. Control Output 1

R: Relay output

Q: Voltage output (for driving SSR)

C: Linear current output

2. Auxiliary Outputs

Blank: None
1: One output
2: Two outputs

3. Option

Blank: None

01: RS-232C communications03: RS-485 communications

B: Two event inputs

H: Heater burnout/Heater short/Heater overcurrent detection (CT1)

4. Input Type

T: Universal thermocouple/platinum resistance thermometer input L: Analog current/voltage input

5. Power Supply Voltage

Blank: 100 to 240 VAC D: 24 VAC/VDC

6. Terminal Type

Blank: Models with screw terminal block C: Models with screwless clamp terminal block

7. Case Color

Blank: Black

8. Communications Protocol

Blank: None

FLK: CompoWay/F communications

Note: 1. Models cannot be made for all combinations of options that are possible in the model number legend. Confirm model availability in *Ordering Information* before ordering.

2. Estimates can be provided for coatings and other specifications that are not given in the datasheet. Ask your OMRON representative for details.
* Auxiliary outputs are relay outputs that can be used to output alarms or processing results.

The applicable standards for the input types are as follows:

K, J, T, E, N, R, S, B: JIS C 1602-1995, IEC 584-1

L: Fe-CuNi, DIN 43710-1985

U: Cu-CuNi, DIN 43710-1985

W: W5Re/W26Re, ASTM E988-1990

JPt100: JIS C 1604-1989, JIS C 1606-1989

Pt100: JIS C 1604-1997, IEC 751

PL II: According to Platinel II electromotive force charts from BASF (previously Engelhard)

Models with Analog Inputs

Input Type	Cur	rent	Voltage				
Input specification	4 to 20 mA	0 to 20 mA	1 to 5 V	0 to 5 V	0 to 10 V		
Setting range			nges by scaling: 199.9, –19.99 to 99.99 or –1.999 to 9.999				
Setting number	0	1	2	3	4		

Shaded settings are the default settings.

Alarm Outputs

Each alarm can be independently set to one of the following 13 alarm types. The default is 2: Upper limit. Auxiliary outputs are allocated for alarms. ON delays and OFF delays (0 to 999 s) can also be specified.

Note: For models with heater burnout, SSR failure, and heater overcurrent detection, alarm 1 will be an OR output of the alarm selected from the following alarm types and the alarms for heater burnout, SSR failure, and heater overcurrent. To output only a heater burnout alarm, SSR failure alarm, and heater overcurrent alarm for alarm 1, set the alarm type to 0 (i.e., no alarm function).

			ut operation			
Set value	Alarm type	When alarm value X is positive	When alarm value X is negative	Description of function		
0	Alarm function OFF	Output OFF		No alarm		
1 *1	Upper- and lower-limit	ON → L H ← SP	*2	Set the deviation in the set point by setting the alarm upper limit (H) and alarm lower limit (L).		
2	Upper-limit	ON SP	ON SP	Set the upward deviation in the set point by setting the alarm value (X).		
3	Lower-limit	ON SP	ON SP	Set the downward deviation in the set point by setting the alarm value (X).		
4 *1	Upper- and lower-limit range	ON J.H.	*3	Set the deviation in the set point by setting the alarm upper limit (H) and alarm lower limit (L).		
5 *1	Upper- and lower-limit with standby sequence	ON SP SP	*4	A standby sequence is added to the upper- and lower-limit alarm (1). *6		
6	Upper-limit with standby sequence	ON SP	ON SP	A standby sequence is added to the upper-limit alarm (2). *6		
7	Lower-limit with standby sequence	ON SP	ON SP	A standby sequence is added to the lower-limit alarm (3). *6		
8	Absolute-value upper-limit	ON OFF	ON OFF 0	The alarm will turn ON if the process value is larger than the alarm value (X) regardless of the set point.		
9	Absolute-value lower-limit	ON OFF	ON OFF	The alarm will turn ON if the process value is smaller than the alarm value (X) regardless of the set point.		
10	Absolute-value upper-limit with standby sequence	ON OFF	ON OFF 0	A standby sequence is added to the absolute-value upper-limit alarm (8). *6		
11	Absolute-value lower-limit with standby sequence	ON OFF	ON OFF	A standby sequence is added to the absolute-value lower-limit alarm (9). *6		
12	LBA (alarm 1 type only)			*7		
13	PV change rate alarm			*8		

- *1. With set values 1, 4 and 5, the upper and lower limit values can be set independently for each alarm type, and are expressed as "I" and "H"
- *2. Set value: 1, Upper- and lower-limit alarm

*3. Set value: 4, Upper- and lower-limit range

- ***4.** Set value: 5, Upper- and lower-limit with standby sequence For Upper- and Lower-Limit Alarm Described Above
 - Case 1 and 2
 <u>Always OFF</u> when the upper-limit and lower-limit hysteresis overlaps.
 - Case 3: Always OFF

- *5. Set value: 5, Upper- and lower-limit with standby sequence <u>Always OFF</u> when the upper-limit and lower-limit hysteresis overlaps.
- *6. Refer to the E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers User's Manual Basic Type (Cat. No. H156) for information on the operation of the standby sequence.
- *7. Refer to the E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers User's Manual Basic Type (Cat. No. H156) for information on the loop burnout alarm (LBA).
- *8. Refer to the E5CN/E5AN/E5EN/E5GN Digital Temperature Controllers User's Manual Basic Type (Cat. No. H156) for information on the PV change rate alarm.

Characteristics

On an act								
Indication accuracy		Thermocouple: $*1$ ($\pm 0.3\%$ of indicated value or $\pm 1^{\circ}$ C, whichever is greater) ± 1 digit max. Platinum resistance thermometer input: ($\pm 0.2\%$ of indicated value or $\pm 0.8^{\circ}$ C, whichever is greater) ± 1 digit max. Analog input: $\pm 0.2\%$ FS ± 1 digit max. CT input: $\pm 5\%$ FS ± 1 digit max.						
Influence of to	emperature *2	Thermocouple input (R, S, B, W, PL II): (±1% of PV or ±10°C, whichever is greater) ±1 digit max.						
Influence of v	oltage *2	Other thermocouple input: *3 (±1% of PV or ±4°C, whichever is greater) ±1 digit max. Platinum resistance thermometer input: (±1% of PV or ±2°C, whichever is greater) ±1 digit max.						
Influence of E (at EN 61326-		Analog input: (±1%FS) ±1 digit max.						
Input samplin	g period	250 ms						
Hysteresis		Models with thermocouple/platinum resistance thermometer input (universal input): 0.1 to 999.9 EU (in units of 0.1 EU) *4 Models with analog input: 0.01 to 99.99% FS (in units of 0.01% FS)						
Proportional I	oand (P)	Models with thermocouple/platinum resistance thermometer input (universal input): 0.1 to 999.9 EU (in units of 0.1 EU) *4 Models with analog input: 0.1 to 999.9% FS (in units of 0.1% FS)						
Integral time	(I)	0 to 3999 s (in units of 1 s)						
Derivative tim	ie (D)	0 to 3999 s (in units of 1 s) *5						
Control perio	d	0.5, 1 to 99 s (in units of 1 s)						
Manual reset		0.0 to 100.0% (in units of 0.1%)						
Alarm setting		-1999 to 9999 (decimal point position depends on input type)						
Affect of signal source resistance		Thermocouple: 0.1° C/ Ω max. (100 Ω max.) Platinum resistance thermometer: 0.1° C/ Ω max. (10 Ω max.)						
Insulation res	istance	20 MΩ min. (at 500 VDC)						
Dielectric stre	ength	2,300 VAC, 50 or 60 Hz for 1 min (between terminals with different charge)						
Vibration	Malfunction	10 to 55 Hz, 20 m/s ² for 10 min each in X, Y, and Z directions						
resistance	Destruction	10 to 55 Hz, 0.75-mm single amplitude for 2 hrs each in X, Y, and Z directions						
Shock	Malfunction	100 m/s², 3 times each in X, Y, and Z directions						
resistance	Destruction	300 m/s², 3 times each in X, Y, and Z directions						
Weight		Controller: Approx. 90 g, Mounting Bracket: Approx. 10 g						
Degree of pro	tection	Front panel: IP66, Rear case: IP20, Terminals: IP00						
Memory prote	ection	Non-volatile memory (number of writes: 1,000,000 times)						
Setup Tool		CX-Thermo version 4.2 or higher						
Setup Tool po	ort	Provided on the side of the E5GN. Connect this port to the computer when using the Setup Tool. An E58-CIFQ1 USB-Serial Conversion Cable is required to connect the computer to the port on the side of the E5GN. *6						
Standards	Approved standards	UL 61010-1, CSA C22.2 No. 1010-1						
	Conformed standards	EN 61010-1 (IEC 61010-1): Pollution level 2, overcurrent category II						
ЕМС		EMI: EN 61326-1 *7 Radiated Interference Electromagnetic Field Strength: EN 55011 Group 1, class A Noise Terminal Voltage: EN 55011 Group 1, class A EMS: EN 61326-1 *7 ESD Immunity: EN 61000-4-2 Electromagnetic Field Immunity: EN 61000-4-3 Burst Noise Immunity: EN 61000-4-4 Conducted Disturbance Immunity: EN 61000-4-6 Surge Immunity: EN 61000-4-5 Power Frequency Magnetic Field Immunity: EN 61000-4-8 Voltage Dip/Interrupting Immunity: EN 61000-4-11						

^{*1.} The indication accuracy of K thermocouples in the -200 to 1300°C range, T and N thermocouples at a temperature of -100°C max., and U and L thermocouples at any temperatures is $\pm 2^{\circ}$ C ± 1 digit max. The indication accuracy of the B thermocouple at a temperature of 400°C max. is not specified. The indication accuracy of B thermocouples in the 400 to 800°C range is ±3°C max. The indication accuracy of the R and S thermocouples at a temperature of 200°C max. is ±3°C ±1 digit max. The indication accuracy of W thermocouples is ±0.3 of PV or ±3°C, whichever is greater, ±1 digit max. The indication accuracy of PL II thermocouples is ±0.3 of PV or ±2°C, whichever is greater, ±1 digit max. *2. Ambient temperature: -10°C to 23°C to 55°C, Voltage range: -15% to 10% of rated voltage

^{*3.} K thermocouple at -100°C max.: ±10° max.

^{*4. &}quot;EU" stands for Engineering Unit and is used as the unit after scaling. For a temperature sensor, the EU is °C or °F.

^{*5.} When robust tuning (RT) is ON, the differential time is 0.0 to 999.9 (in units of 0.1 s).

^{*6.} External serial communications (RS-232C or RS-485) and cable communications for the Setup Tool can be used at the same time.

^{*7.} Industrial electromagnetic environment (EN/IEC 61326-1 Table 2)

USB-Serial Conversion Cable

Applicable OS	Windows XP/Vista/7/8
Applicable software	CX-Thermo version 4 or higher
Applicable models	E5AN/E5EN/E5CN/E5CN-U/E5AN-H/ E5EN-H/E5CN-H/E5GN
USB interface standard	Conforms to USB Specification 1.1.
DTE speed	38400 bps
Connector specifications	Computer: USB (type A plug) Temperature Controller: Setup Tool port (on bottom of Controller)
Power supply	Bus power (Supplied from USB host controller.)
Power supply voltage	5 VDC
Current consumption	70 mA
Ambient operating temperature	0 to 55°C (with no condensation or icing)
Ambient operating humidity	10% to 80%
Storage temperature	-20 to 60°C (with no condensation or icing)
Storage humidity	10% to 80%
Altitude	2,000 m max.
Weight	Approx. 100 g

Note: A driver must be installed in the personal computer. Refer to installation information in the operation manual for the Conversion Cable.

Communications Specifications

	-			
Transmission line connection method	RS-485: Multipoint RS-232C: Point-to-point			
Communications	RS-485 (two-wire, half duplex), RS-232C			
Synchronization method	Start-stop synchronization			
Protocol	CompoWay/F, SYSWAY, or Modbus			
Baud rate	1200, 2400, 4800, 9600, 19200, 38400, or 57600 bps			
Transmission code	ASCII			
Data bit length *	7 or 8 bits			
Stop bit length *	1 or 2 bits			
Error detection	Vertical parity (none, even, odd) Frame check sequence (FCS) with SYSWAY Block check character (BCC) with CompoWay/F or CRC-16 Modbus			
Flow control	None			
Interface	RS-485, RS-232C			
Retry function	None			
Communications buffer	217 bytes			
Communications response wait time	0 to 99 ms Default: 20 ms			

^{*}The baud rate, data bit length, stop bit length, and vertical parity can be individually set using the Communications Setting Level.

Current Transformer (Order Separately) Ratings

Dielectric strength	1,000 VAC for 1 min
Vibration resistance	50 Hz, 98 m/s ²
Weight	E54-CT1: Approx. 11.5 g, E54-CT3: Approx. 50 g
Accessories (E54-CT3 only)	Armatures (2) Plugs (2)

Heater Burnout Alarms, SSR Failure Alarms, and Heater Overcurrent Alarms

· ·	
CT input (for heater current detection)	Models with detection for single-phase heaters: One input
Maximum heater current	50 A AC
Input current indication accuracy	±5% FS ±1 digit max.
Heater burnout alarm setting range *1	0.1 to 49.9 A (in units of 0.1 A) Minimum detection ON time: 100 ms
SSR failure alarm setting range *2	0.1 to 49.9 A (in units of 0.1 A) Minimum detection OFF time: 100 ms
Heater overcurrent alarm setting range *3	0.1 to 49.9 A (in units of 0.1 A) Minimum detection ON time: 100 ms

- *1. For heater burnout alarms, the heater current will be measured when the control output is ON, and the output assigned to the alarm 1 function will turn ON if the heater current is lower than the set value (i.e., heater burnout detection current value).
- *2. For SSR failure alarms, the heater current will be measured when the control output is OFF, and the output assigned to the alarm 1 function will turn ON if the heater current is higher than the set value (i.e., SSR failure detection current value).
- *3. For heater overcurrent alarms, the heater current will be measured when the control output is ON, and the output assigned to the alarm 1 function will turn ON if the heater current is higher than the set value (i.e., heater overcurrent detection current value).

Electrical Life Expectancy Curve for Relays (Reference Values)

External Connections

 A voltage output (control output, for driving SSR) is not electrically insulated from the internal circuits. When using a grounding thermocouple, do not connect any of the control output terminals to ground. (If the control output terminals are connected to ground, errors will occur in the measured temperature values as a result of leakage current.)

E5GN Controllers

Nomenclature

E5GN

The front panel is the same for the E5GN.

Dimensions (Unit: mm)

E5GN **Models with Screw Terminal Blocks**

Panel Cutout

Mounted Separately 45^{+0.6}

- Recommended panel thickness is 1 to 5 mm.
- Recommended panel thickness is 1 to 5 mm. Group mounting is not possible in the vertical direction. (Maintain the specified mounting space between Controllers.)
 To mount the Controller so that it is waterproof, insert the waterproof packing onto the Controller. When two or more Controllers are mounted, make sure that the surrounding temperature does not exceed the allowable operating temperature specified in the specifications.
 The terminal screw for auxiliary output 2 cannot be tightened while Controllers are group mounted.
 The ES8-CIFQ1 cannot be connected when the Temperature Controllers are group mounted.

E5GN-□-C Models with **Screwless Clamp Terminal Blocks**

Panel Cutout

- Recommended panel thickness is 1 to 5 mm.
- Hecommended panel thickness is 1 to 5 mm. Group mounting is not possible in the vertical direction. (Maintain the specified mounting space between Controllers.)
 When two or more Controllers are mounted, make sure that the surrounding temperature does not exceed the allowable operating temperature specified in the specifications.
 The E58-CIFQ1 cannot be connected when the Temperature Controllers are group mounted.
- Temperature Controllers are group mounted.

Accessories (Order Separately)

USB-Serial Conversion Cable E58-CIFQ1

Waterproof Packing Y92S-32 (for DIN 48 × 24)

Order the Waterproof Packing separately if it becomes lost or damaged.

The Waterproof Packing can be used to achieve an IP66 degree of protection.

(Deterioration, shrinking, or hardening of the waterproof packing may occur depending on the operating environment. Therefore, periodic replacement is recommended to ensure the level of waterproofing specified in IP66. The time for periodic replacement depends on the operating environment. Be sure to confirm this point at your site. Consider one year a rough standard. OMRON shall not be liable for the level of water resistance if the customer does not perform periodic replacement.)

The Waterproof Packing does not need to be attached if a waterproof structure is not required.

Current Transformers

E54-CT1

E54-CT3

E54-CT3 Accessory

• Armature

Connection Example

E54-CT1

Thru-current (Io) vs. Output Voltage (Eo) (Reference Values)

Maximum continuous heater current: 50 A (50/60 Hz) Number of windings: 400±2 Winding resistance: 18±2 Ω

Thru-current (Io) A (r.m.s.)

E54-CT3

Thru-current (Io) vs. Output Voltage (Eo) (Reference Values)

Maximum continuous heater current: 120 A (50/60 Hz) (Maximum continuous heater current for the Temperature Controller is 50 A.) Number of windings: 400±2 Winding resistance: $8\pm0.8~\Omega$

Thru-current (Io) A (r.m.s.)

Terms and Conditions Agreement

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

- (a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.
- (b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED. ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE

PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof

Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions. Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

2015.8

In the interest of product improvement, specifications are subject to change without notice.
